

## Technical Bulletin TB10-001 Change Request: NA

**Title:** Oracle Critical Patch Update July 2010 – CPUJUL2010 for 3.0x

Platform	Version	Operating System	Category
IWS Servers	3.0x	Windows & Solaris	Oracle

### Description:

A Critical Patch Update is a series of patches for potential security vulnerabilities discovered in the Oracle Database Server.

This is not a complete software distribution and you must install it over an existing 9.2.0.8 Oracle Server installation.

This patch is a server only patch, and should only be installed on an InfoWorkSpace 3.0x server.

### Action:

1. Download the following Oracle patches from the Oracle MetaLink web site at <http://metalink.oracle.com>. This requires your own Oracle MetaLink user account:

Platform	CPUJUL2010
Windows	9683644
Solaris (32-Bit)	9655027
Solaris (64-Bit)	9655027

To Download Oracle patches from the Oracle Support Services web site, after logging in using your own Oracle MetaLink user account:

- a) Select the Patches and Updates tab.
  - b) Click the Simple Search link.
  - c) In the Search By field, enter patch number.
  - d) Select appropriate platform from dropdown menu.
  - e) Click Go.
  - f) Click Download and save file to disk.
2. Install CPUJUL2010 using the instructions in the readme file located at: [ftp://ftp.ezenia.com/CPUJUL2010/Oracle\\_CPUJUL2010\\_30\\_readme.txt](ftp://ftp.ezenia.com/CPUJUL2010/Oracle_CPUJUL2010_30_readme.txt)
