

Critical Incident Management Solutions (CIMS)

Emergency Preparedness for Educational Institutions

Why settle for less when lives of students and faculty are at risk?

Before, During and After an Event

To help educational institutions perform to their utmost during emergencies, they must plan, prepare and practice beforehand. Then, these teams must perform during the emergency; they must know their roles, responsibilities and limitations. In the aftermath, schools need to be able to review and assess what went well and what did not. They must then feed that knowledge back into planning and preparedness so that future responses can benefit from past experiences.

Technology Speeds Responsiveness

The days of taking the time to bring people together in a room to develop a threat response are long gone. Today's threats are immediate - and they demand a much more rapid response. With powerful virtual meeting tools and the ability to instantly communicate to thousands at your fingertips, you can meet this challenge head-on.

The Robust CIMS Environment

Full Communication and Notification Feature Set

To integrate and deliver your response instantly, you need a wide range of audio, graphics, text, multimedia and notification tools in a single virtual workspace.

Ease-of-Use

A complete, flexible toolset is only effective if it has a user-friendly interface. It must be nearly effortless to collaborate with colleagues and emergency responders in real-time using the full suite of on-line tools.

Reliability and Security

To ensure that your emergency response sessions are truly trusted, your systems must be reliable, resilient and secure.

The overwhelming need for instant access to people and information in an emergency makes Ezenia InfoWorkSpace (IWS) the perfect critical incident management solution (CIMS). By integrating IWS into daily planning functions, the critical incident management team can be assured that the basic infrastructure and tools it needs when an event occurs will be there to support secure and reliable sharing and tracking of accurate information. Ezenia's InfoWorkSpace (IWS) was born on the battlefield and as a result, has the robust feature set and performance required to meet the demands of critical incident response.

Ezenia InfoWorkSpace is designed around the concept of bringing together, in a fully functional virtual environment, geographically dispersed organizations where complex concepts, ideas, and documents can be exchanged. IWS equips decision-makers with the tools they need to instantly mobilize the necessary first responders, in disaster areas, such as firefighters, police, EMTs and other emergency service organizations. It provides a variety of tools including text and audio chat, whiteboarding, and a number of other shared applications. With this powerful collaboration suite, emergency managers can coordinate and execute critical incident plans at a moment's notice.

Meet Virtually with InfoWorkSpace

Instant, persistent, secure workspace

- Audio and text chat with archives
- Application viewing and sharing
- Advance Whiteboard functionality (time stamps—date, time and user)
- Virtual Bulletin Boards
- Customizable virtual environment logically organized into buildings, floors and rooms within campus setting
- Presentation facility

Ezenia Solutions for Instant Alerts

- Instant Notification to thousands simultaneously
- Planning Environment
- Fully scalable user alert
- Remote server callout engine
- 24x7 callout access profile
- Groups informed with predefined message
- Buttons setup by group or message allowing one click callout
- Optional GeoCoded mapping allows you to select area via graphics and make calls to community's
- Notify internal staff instantly and external law enforcement simultaneously
