TB Title:

**Solaris Client Installation Steps Incorrect on V2.5.1 Client CD**

Platform:

**Solaris**

Change Request(s):

**6155**

Category(s):

**Solaris Client Installation**

Version:

**InfoWorkSpace 2.5.1**

### Synopsis:

The steps to install a Solaris Client are incorrect in the pdf that is on the CD only. The file name 25 is used instead of 251. Replace the Client Install Guide pdf on the server for use with the Documentation function.

### Solution:

1. From the server, save the IWSCClient\_Install.pdf from the web site at [http://www.infoworkspace.com/iwsdocs-v251/IWSCClient\\_Install.pdf](http://www.infoworkspace.com/iwsdocs-v251/IWSCClient_Install.pdf).
2. Navigate to the appropriate file. This depends on the Web Server you are running. The file in question is  
<DocsDir>/documentation/manuals/IWSCClient\_Install.pdf

where DocsDir is

<iPlanetWebDir>/docs

or

<TomcatDir>/jakarta-tomcat-3.2.2/webapps/ROOT

where <iPlanetWebDir> is the directory where the iPlanet web server is installed (by default /opt/iplanet/servers/iWS on Solaris and c:\iplanet\servers\iWS on Windows)

and <TomcatDir> is the directory where Tomcat is installed (by default c:\tomcat)

The copy command for Solaris is 'cp' and for Windows is 'copy' (or you can do it via Windows Navigator or File Manager).
